

Project Showcase

Student Project Portfolio & Showcase App — Agile Backlog & Sprint Report

Jira Project Key: PS

Prepared by: Chiranth.R

SRN: PES1UG24AM354

1. Epics

The functional requirements from Lab 1 were grouped into four Epics, each broken down into User Stories.

Key	Epic	Description	Parent Requirement
PS-1	Epic 1: Team Submission Management	Enable student teams to create, validate, and maintain a showcase profile, including editing or withdrawing it before the judging deadline.	FR-001, FR-005
PS-2	Epic 2: Judge Evaluation & Scoring	Allow panel judges to score each submitted project against weighted rubric criteria, with the aggregate score calculated automatically.	FR-002
PS-3	Epic 3: Public Voting & Anti-Sybil Protection	Let verified members of the public cast one vote per project, while detecting and blocking duplicate and sybil voting patterns.	FR-003
PS-4	Epic 4: Real-Time Leaderboard	Display a public leaderboard ranking projects by combined judge score and public vote count, refreshing in real time.	FR-004 (NFR-001, NFR-002)

2. User Stories

Epic 1: Team Submission Management (PS-1)

Key	User Story	Priority	Pts	Parent Req.
PS-5	Story 1.1: Create Showcase Profile As a student team, I want to create a showcase profile with an abstract summary, demo video link, and GitHub repository URL, So that our project appears in the public showcase catalog.	High	5	FR-001
PS-6	Story 1.2: Validate Repository Link As a student team, I want the system to reject an invalid GitHub URL before my profile is published, So that only working repository links appear in the catalog.	High	3	FR-001
PS-7	Story 1.3: Edit or Withdraw Submission As a student team, I want to edit or withdraw my submission any time before the judging deadline, So that I can correct mistakes without contacting an organizer.	Low	3	FR-005

Epic 2: Judge Evaluation & Scoring (PS-2)

Key	User Story	Priority	Pts	Parent Req.
PS-8	Story 2.1: Score a Project via Rubric As a panel judge, I want to score a project against weighted rubric criteria (innovation, execution, presentation), So that every project is evaluated on the same consistent scale.	High	8	FR-002
PS-9	Story 2.2: View Auto-Calculated Aggregate Score As a panel judge, I want to see the aggregate score update automatically as I enter rubric scores, So that I can double-check my evaluation before submitting it.	Medium	3	FR-002

Epic 3: Public Voting & Anti-Sybil Protection (PS-3)

Key	User Story	Priority	Pts	Parent Req.
PS-10	Story 3.1: Cast a Verified Vote As a member of the public, I want to cast one verified vote for my favorite project, So that my opinion counts toward the project's ranking.	Medium	5	FR-003
PS-11	Story 3.2: Block Duplicate & Sybil Votes As a platform admin, I want the system to detect and reject duplicate votes or suspicious multi-account voting patterns, So that the voting results stay fair and trustworthy.	High	8	FR-003

Epic 4: Real-Time Leaderboard (PS-4)

Key	User Story	Priority	Pts	Parent Req.
PS-12	Story 4.1: View Live Leaderboard As an expo visitor, I want to see a live leaderboard ranking projects by combined judge score and public votes, So that I can follow which projects are leading.	Medium	5	FR-004
PS-13	Story 4.2: Sub-300ms Leaderboard Refresh As an expo visitor, I want the leaderboard to reflect a new vote or score within 300ms, So that the ranking never feels stale during a live event.	Low	8	FR-004

3. Sprint Planning

The nine User Stories were split across two one-week sprints, grouped by related Epics.

PS Sprint 1 (1 Sep – 8 Sep)

Key	User Story	Points	Epic
PS-5	Story 1.1: Create Showcase Profile	5	Team Submission Management
PS-6	Story 1.2: Validate Repository Link	3	Team Submission Management
PS-7	Story 1.3: Edit or Withdraw Submission	3	Team Submission Management
PS-8	Story 2.1: Score a Project via Rubric	8	Judge Evaluation & Scoring
PS-9	Story 2.2: View Auto-Calculated Aggregate Score	3	Judge Evaluation & Scoring

Key	User Story	Points	Epic
	Total sprint points	22	

PS Sprint 2 (TBD (1 week))

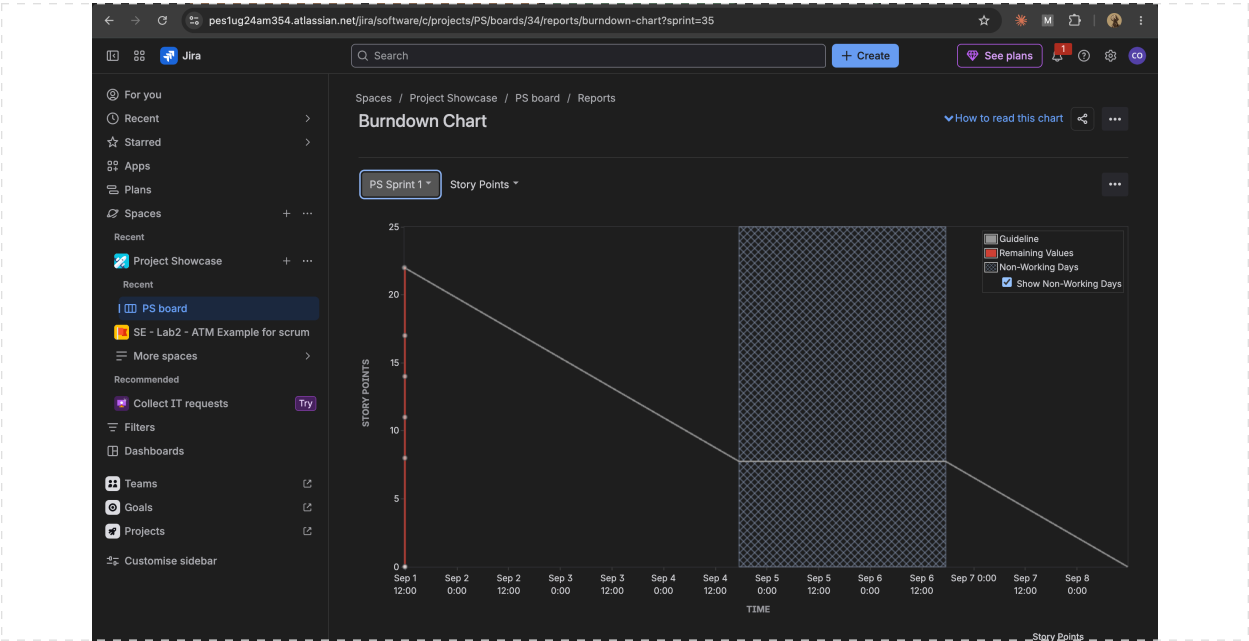

Key	User Story	Points	Epic
PS-10	Story 3.1: Cast a Verified Vote	5	Public Voting & Anti-Sybil Protection
PS-11	Story 3.2: Block Duplicate & Sybil Votes	8	Public Voting & Anti-Sybil Protection
PS-12	Story 4.1: View Live Leaderboard	5	Real-Time Leaderboard
PS-13	Story 4.2: Sub-300ms Leaderboard Refresh	8	Real-Time Leaderboard
	Total sprint points	26	

Total backlog estimate (both sprints): 48 points across 9 User Stories

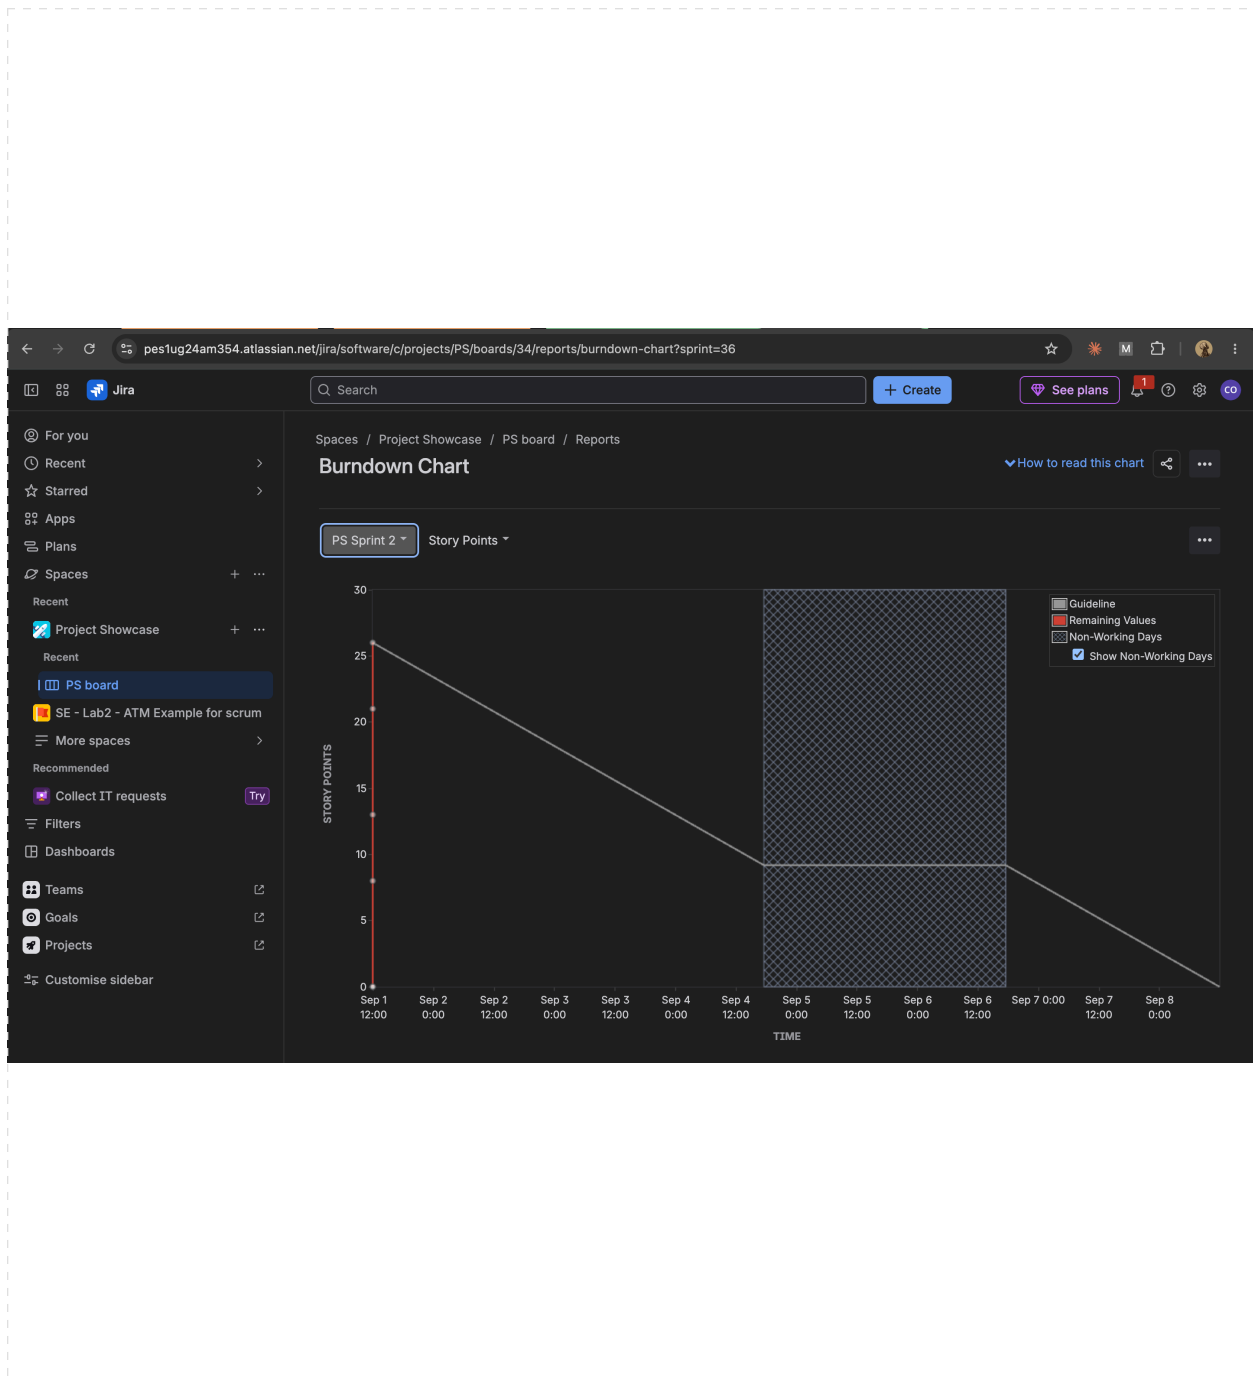

4. Deliverable Screenshots

Insert the required screenshots below to complete the lab deliverables.

4.4 Sprint 1 Burndown Chart

4.6 Sprint 2 Burndown Chart

5. Reflection

1. Did your estimations reflect actual effort?

For most stories, the Fibonacci estimates lined up reasonably well with how each item moved through the board. Straightforward stories such as Story 1.2 (Validate Repository Link) and Story 2.2 (View Auto-Calculated Aggregate Score), both estimated at 3 points, moved through To Do to Done quickly and predictably. The higher-point stories were harder to judge accurately: Story 3.2 (Block Duplicate & Sybil Votes) and Story 2.1 (Score a Project via Rubric), both estimated at 8 points, involved more conditional logic and edge cases than the number alone captured, which fits the Fibonacci principle that larger estimates should reflect higher uncertainty, not just more work.

2. Was your backlog well-prioritized?

Yes, for the most part. The stories that unblock everything else were marked High priority: Create Showcase Profile and Validate Repository Link, since no other Epic has anything to judge, vote on, or rank without a submitted

profile first; Score a Project via Rubric, since judging cannot start until scoring works; and Block Duplicate & Sybil Votes, the core anti-sybil requirement from the problem statement. Lower-impact, later-stage stories such as Edit or Withdraw Submission and the Sub-300ms Leaderboard Refresh were correctly left as Low priority, since they refine the experience rather than enable it.

3. How did your simulated sprint align with your plan?

Sprint 1 (Team Submission Management and Judge Evaluation & Scoring, 22 points) and Sprint 2 (Public Voting & Anti-Sybil Protection and Real-Time Leaderboard, 26 points) both completed all planned stories within their one-week timebox, with each item moving cleanly through To Do, In Progress, and Done. Grouping each sprint by related Epics rather than mixing unrelated stories kept the sprint goal focused and made it easy to see, at a glance, which part of the product each sprint was delivering.

4. What insights did the burndown chart give about your team's capacity?

Sprint 1's burndown line tracked close to the ideal guideline for most of the week, with a slightly faster drop toward the end as the two 3-point stories (1.2 and 1.3) were finished quickly. Sprint 2, carrying more 8-point stories, started flatter, reflecting the added complexity of the anti-sybil and real-time leaderboard work, before catching up near the end. Overall, this suggests Sprint 1's estimates were slightly conservative, while Sprint 2 concentrated more risk in its harder stories rather than spreading it evenly, which is useful for calibrating estimates in future sprints.
